Fades between the colors of the rainbow

Personalized

- Light effect saved  /
- Saving the lighting effect  /
- No lighting effect  /
- There are 5 different established lighting effects

In Win HALO Driver Instructions

- To create your own lighting effect, simply press one of the five established lighting effect, then add on the desired lighting effect (choose the color -> choose the setting mode -> choose the time period -> press "Add"). After you finish adding the effects, hold one of the dark numbered icons until it lights up and the number turns from white to black.
 - To create your own lighting effect, simply press one of the five established lighting effect, then press "Clear". The bar under the number icon will be all black and now you can start your customizable lighting effect. After you finish your creation, hold one of the dark number icons until it lights up to save your work.
 - To delete the saved lighting effect, simply click "Clear" and hold the lighting mode and the number icon you will like to delete, until the number icon turns to black.
 - If you want to share your customizable lighting effect with other users, click "export". You can also click "import" to enjoy other users' lighting effects.
6. If you don't need to use the HALO driver, just click "OFF" to shut down the software.
 7. To close HALO, click the "X" icon on the right corner, and you will find the small HALO icon in your system tray. Please click the small icon and exit the software.
 8. HALO will open automatically when you open your PC.
 9. HALO will memorize the last lighting effect after you shut down your PC and show up the lighting effect when you restart your PC.
 10. Please only use one HALO software at a time.
